Contemporary Cardiac Resynchronization Implantable Cardioverter Defibrillator Battery Longevity in a Community Hospital Heart Failure Cohort

An independent poster presented at Heart Failure Society of America’s (HFSA) 2014 Annual Meeting comparing contemporary CRT-D longevity

DESCRIPTION

Contemporary Cardiac Resynchronization Implantable Cardioverter Defibrillator Battery Longevity in a Community Hospital Heart Failure Cohort was an independent, retrospective observational study comparing battery longevity of contemporary cardiac resynchronization therapy defibrillators (CRT-Ds) of all patients implanted with CRT-ICDs from July 1, 2008, to October 31, 2010, at The Good Samaritan Hospital in Lebanon, PA.1 This study is unique in that patients cared for in non-academic community hospitals (NCH) may have substantial differences in age, gender, and comorbidities than those in academic centers and national trials.

IMPORTANT OUTCOMES

- CRT-Ds reaching primary event occurred in 1 of 53 Boston Scientific devices (1.9%), 14 of 28 Medtronic devices (50%), and 1 of 10 St. Jude Medical devices (10%)
- During 4+/0.8 years follow-up, there was a 10% mortality rate and 16 devices reached ERI (17.6%)
- Boston Scientific had the highest RA lead impedance while MDT had the highest RV lead impedance
- Patients reaching ERI had higher RV and LV output and RV pulse width

This study agreed with the results of Dr. Saba’s2 and Dr. Johansen’s3 studies — Boston Scientific CRT-Ds are lasting significantly longer than Medtronic CRT-Ds.4

Get the facts and cut the risk.

Boston Scientific offers ICDs and CRT-Ds designed to be the world’s longest lasting — with up to 80% more battery capacity than other available models.5 Better CRT-D longevity could mean a reduced risk of exposure to complications and infections for your patients.6,7,8

Contemporary Cardiac Resynchronization Implantable Cardioverter Defibrillator Battery Longevity in a Community Hospital Heart Failure Cohort

An independent poster presented at the HFSA 2014 Annual Meeting comparing contemporary CRT-D longevity

PATIENT COHORT
All patients implanted (N = 90) with a CRT-D at The Good Samaritan Hospital in Lebanon, PA, from July 2008 through July 2010. Mean age was 72+/-9, creatinine 1.3+/-0.5 mg/dl, and ejection fraction 0.25+/-0.08. Medtronic = 28 patients, St. Jude = 10 patients, Boston Scientific = 53 patients.

METHODS
• Baseline demographics, device, and lead data were obtained from the electronic medical record
• Covariates that can affect time to battery depletion were included in a multivariate Cox proportional hazard model

PRIMARY ENDPOINTS
Device replacement for the battery reaching the elective replacement indicator (ERI)

PRINCIPAL INVESTIGATOR
Jeffrey Williams, M.D., Medical Director, Heart Rhythm Center and Clinical Cardiac Electrophysiology, Lebanon Cardiology Associates

Presented at HFSA 2014. http://www.onlinejcf.com/article/S1071-9164(14)00389-3/fulltext. Contemporary Cardiac Resynchronization Implantable Cardioverter Defibrillator Battery Longevity in a Community Hospital Heart Failure Cohort was an independent, retrospective observational study comparing battery longevity of contemporary cardiac resynchronization therapy defibrillators (CRT-Ds) of all patients implanted with CRT-ICDs from July 1, 2008, to October 31, 2010, at The Good Samaritan Hospital in Lebanon, PA. Medtronic = 28 patients, St. Jude = 10 patients, Boston Scientific = 53 patients.

3. Hjortshoj S, Johansen J, Jorgensen D, Nielsen J, Petersen H. Device Longevity in Cardiac Resynchronization Therapy Implantable Cardioverter Defibrillators Differs Between Manufacturers: Data from the Danish ICD Registry. Presented at HRS 2014. http://ondemand.hrsonline.org/common/presentation-detail.aspx?id=183912419000. Device Longevity in Cardiac Resynchronization Therapy Implantable Cardioverter Defibrillators Differs Between Manufacturers was an independent, retrospective observational study comparing battery longevity of contemporary cardiac resynchronization therapy defibrillators (CRT-Ds) of all patients implanted with CRT-ICDs from January 1, 2007, to October 31, 2013, in Denmark. The initial study population included 2,793 patients: battery depletion or device failure was identified in 43 Medtronic, 4 Biotronik, 1 Boston Scientific, and 33 St. Jude devices. Medtronic = 451 patients, Boston Scientific = 136 patients, St. Jude = 1,587 patients, Biotronik = 389. Time to exchange of the device because of battery depletion or device failure recorded in the Danish ICD Registry was the endpoint.

4. Survival rate calculated using device replacements for battery depletion as indicated by ERI.

CRT-D System from Boston Scientific — COGNIS™

Indications and Usage
These Boston Scientific Cardiac Resynchronization Therapy Defibrillators (CRT-Ds) are indicated for patients with heart failure who receive stable optimal pharmacologic therapy (OPT) for heart failure and who meet any one of the following classifications:
• Moderate to severe heart failure (NYHA Class III-IV) with EF ≤ 35% and QRS duration ≥ 120 ms
• Left bundle branch block (LBBB) with QRS ≥ 130 ms, EF ≤ 30%, and mild (NYHA Class II) ischemic or nonischemic heart failure or asymptomatic (NYHA Class I) ischemic heart failure

Contraindications
There are no contraindications for this device.

Warnings
Read the product labeling thoroughly before implanting the pulse generator to avoid damage to the system. For single patient use only. Do not reuse, reprocess, or resterilize. Program the pulse generator Tachy Mode to Off during implant, explant or postmortem procedures. Always have sterile external and internal defibrillator protection available during implant and electrophysiologic testing.

Ensure that an external defibrillator and personnel skilled in CPR are present during post-implant device testing. Advise patients to seek medical guidance before entering environments that could adversely affect the operation of the active implantable medical device, including areas protected by a warning notice that prevents entry by patients who have a pulse generator. Do not expose a patient to MRI scanning. Do not subject a patient with an implanted pulse generator to diathermy. Do not use atrial tracking modes in patients with chronic refractory atrial tachyarrhythmias. Do not use atrial-only modes in patients with heart failure. LV lead dislodgment to a position near the atria can result in atrial oversensing and LV pacing inhibition. Physicians should use medical discretion when implanting this device in patients who present with slow VT. Do not kink, twist or braid the lead with other leads. Do not use defibrillation patch leads with the CRT-D system. Do not use this pulse generator with another pulse generator. For Patient Triggered Monitor (PTM) feature, make sure the feature is enabled prior to sending the patient home with a magnet. Once the PTM feature has been triggered and the magnet response programming is set to inhibit therapy, the patient should not reapply the magnet.
ICD Systems from Boston Scientific – PUNCTUATM, ENERGENTM, and INCEPTATM

Indications and Usage
The PUNCTUATM, ENERGENTM, and INCEPTATM Cardiac Resynchronization Therapy Defibrillators (CRT-Ds) are indicated for patients with heart failure who receive stable optimal pharmacologic therapy (OPT) for heart failure and who meet any one of the following classifications:

- Moderate to severe heart failure (NYHA Class III–IV) with EF ≤ 35% and QRS duration ≥ 120 ms
- Left bundle branch block (LBBB) with QRS ≥ 130 ms, EF ≤ 30%, and mild (NYHA Class II) ischemic or nonischemic heart failure or asymptomatic (NYHA Class I) ischemic heart failure

Contraindications
There are no contraindications for this device.

Warnings
Read the product labeling thoroughly before implanting the pulse generator to avoid damage to the system. For single patient use only. Do not reuse, reprocess, or resterilize. Program the pulse generator in Tachy Mode to Off during implant, explant or postmortem procedures. Always have external defibrillator protection available during implant and electrophysiologic testing. Ensure that an external defibrillator and medical personnel skilled in cardiopulmonary resuscitation (CPR) are present during post-implant device testing. Patients who present with slow VT. Do not kink, twist or braid the lead with other leads.

Precautions
For specific information on precautions, refer to the following sections of the product labeling: clinical considerations; sterilization and storage; implantation; device programming; follow-up testing; implant and device programming; follow-up testing; explant and disposal; environmental and medical therapy hazards; hospital and medical environments; and supplemental precautionary information. ADVISE patients to avoid electromagnetic interference (EMI) because EMI may cause the pulse generator to deliver inappropriate therapy or inhibit appropriate therapy.

ICD Systems from Boston Scientific – PUNCTUATM, ENERGENTM, and INCEPTATM

ICD Indications and Usage
PUNCTUATM, ENERGENTM, and INCEPTATM ICDs are intended to provide ventricular antitachycardia pacing and ventricular defibrillation for automated treatment of life-threatening ventricular arrhythmias.

Contraindications
Use of these ICD systems are contraindicated in: Patients whose ventricular tachyarrhythmias may have reversible cause, such as 1) digitalis intoxication, 2) electrolyte imbalance, 3) hypoxia, or 4) sepsis, or whose ventricular tachyarrhythmias have a transient cause, such as 1) acute myocardial infarction, 2) electrocution, or 3) drowning. Patients who have a unipolar pacemaker.

Warnings
Read the product labeling thoroughly before implanting the pulse generator to avoid damage to the ICD system. For single patient use only. Do not reuse, reprocess, or resterilize. Program the pulse generator in Tachy Mode to Off during implant, explant or postmortem procedures. Always have external defibrillator protection available during implant and electrophysiologic testing. Ensure that an external defibrillator and medical personnel skilled in cardiopulmonary resuscitation (CPR) are present during post-implant device testing. Patients who present with slow VT. Do not kink, twist or braid the lead with other leads.

Precautions
For specific information on precautions, refer to the following sections of the product labeling: clinical considerations; sterilization and storage; implantation; device programming; environmental and medical therapy hazards; hospital and medical environments; home and occupational environments; follow-up testing; explant and disposal; supplemental precautionary information. ADVISE patients to avoid sources of electromagnetic interference (EMI).

Potential Adverse Events
Potential adverse events from implantation of the CRT-D system include, but are not limited to, the following: allergic/physical/physiologic reaction, death, erosion/migration, fibrillation or other arrhythmias, lead or accessory breakage (fracture/insulation/lead tip), hematoma/serosa, inappropriate or inability to provide therapy (shocks/pacing/sensing), infection, procedure related, and component failure. Patients who develop psychological intolerance to the ICD pulse generator system and may experience fear of shocking, fear of device failure, or imagined shocking. In rare cases severe complications or device failures can occur.

Refer to the product labeling for specific indications, contraindications, warnings/precautions and adverse events. Rx only.

Potential Adverse Events
Potential adverse events from implantation of the CRT-D system include, but are not limited to, the following: allergic/physical/physiologic reaction, death, erosion/migration, fibrillation or other arrhythmias, lead or accessory breakage (fracture/insulation/lead tip), hematoma/serosa, inappropriate or inability to provide therapy (shocks/pacing/sensing), infection, procedure related, and component failure.
